PERSONAL STATEMENT

I am a learner from Generation's Junior Software Developer Bootcamp seeking a software developer position. I have 5 years of work experience in the personal business sector, which allowed me to develop communication and teamwork skills. I am eager to apply my previous work experiences and newly developed technical skills to launch my career in the tech sector.

PROJECT

Fit Venger — This project involves tracking or keeping your activities on the website. We use CSS, JavaScript, ReactJs, and MongoDB to build this website.

Jamming — Build the project about API. I study about React and create this website from React and use API to save the playlist to Spotify and anybody who have I access to use it, they can use my playlist in the Spotify application.

Find my hat! — A command-line interface (CLI) game using JavaScript to create a maze randomly and move the character to the hat location without stepping into obstacles.

Colmar academy — A responsive website for a new school landing page using HTML and CSS.
